CD ROM DESIGN

We can custom build you a CD ROM to the highest specifications to include:

- Disc mounted independent video playing.
- Your colour scheme, your logo, your design.
- Custom made buttons and graphics.
- Auto load facility, no complications for the user.
- Links to your website.
- 3D graphic imaging to better illustrate your message.

Option 1: The Basic Model

Auto loading CD with basic menu system linking to PDF documents, photos, brochures etc as supplied. Basic template design, logos & built in video if required. We can also provide an interactive virtual panorama tour.

Option 2: More Advanced

All the above with custom designed buttons and graphics to suit your particular business colour scheme and logo. All images and information are contained within the program making it smoother and easier to use. Interactive links throughout the presentation allowing the user to navigate back and forward with ease. Overall, a better crafted more stylish production tailored to your needs.

Option 3: The Hybrid

All in Option 2 plus here we make a DVD which will operate in standard DVD players to show your video, but also perform as a CD ROM in all PCs. This plus interactive sounds for all buttons and links and background music (if required) to help create the ultimate image. We can also provide 3D illustrations to help personalise the overall look. Finally, we will design your cover (DVD box, card sleeve etc) and provide artwork for the disc itself.

We would very much like to meet with you to discuss your needs, please contact me, Stephen O'Brien for a free consultation.
